

# EDUCATION PARADIGMS AND POSSIBILITIES

Peter Rehor PhD

"I've got it too, Omar... a strange feeling like we've just been going in circles."

7/19/2010

It depends, where  
do you want to get  
to?

Which Way Should I  
Go?

# Bloom's Taxonomy

## **KNOWLEDGE**

Universal axioms and principles: terminology, facts, specifics, conventions, and criteria versus principles, theories, structures, and methods

## **COMPREHENSION**

The use of material in a form different from the way it was learned, i.e. translation, interpretation, extrapolation

## **APPLICATION**

Problem solving and the ability to do case study

## **ANALYSIS**

of elements, of relations, of organizational principles: an ability to break down a situation into its parts

## **SYNTHESIS**

Production of a unique communication which puts a field in a broader context, production of a plan or a set of objectives

## **EVALUATION**

Is it good or bad, workable, helpful, etc.? What values does it uphold? Internal versus external evidence

# KRATHWALL TAXONOMY

**Receiving** is being aware of or sensitive to the existence of certain ideas, material, or phenomena and being willing to tolerate them. Examples include: to differentiate, to accept, to listen

**Responding** is committed in some small measure to the ideas, materials, or phenomena involved by actively responding to them. Examples are: to comply with, to follow, to commend, to volunteer.

**Valuing** is willing to be perceived by others as valuing certain ideas, materials, or phenomena. Example: to debate.

**Organization** is to relate the value to those already held and bring it into a harmonious and internally consistent philosophy. Examples are: to discuss, to theorize, to formulate, to examine.

**Characterization by value** or value set is to act consistently in accordance with the values he or she has internalized. Examples include: to revise, to require, to avoid, to resist, to resolve.

# PSYCHOMOTOR TAXONOMY

**Imitation:** Observing and patterning behavior after someone else. Performance may be of low quality. Example: Copying a work of art.

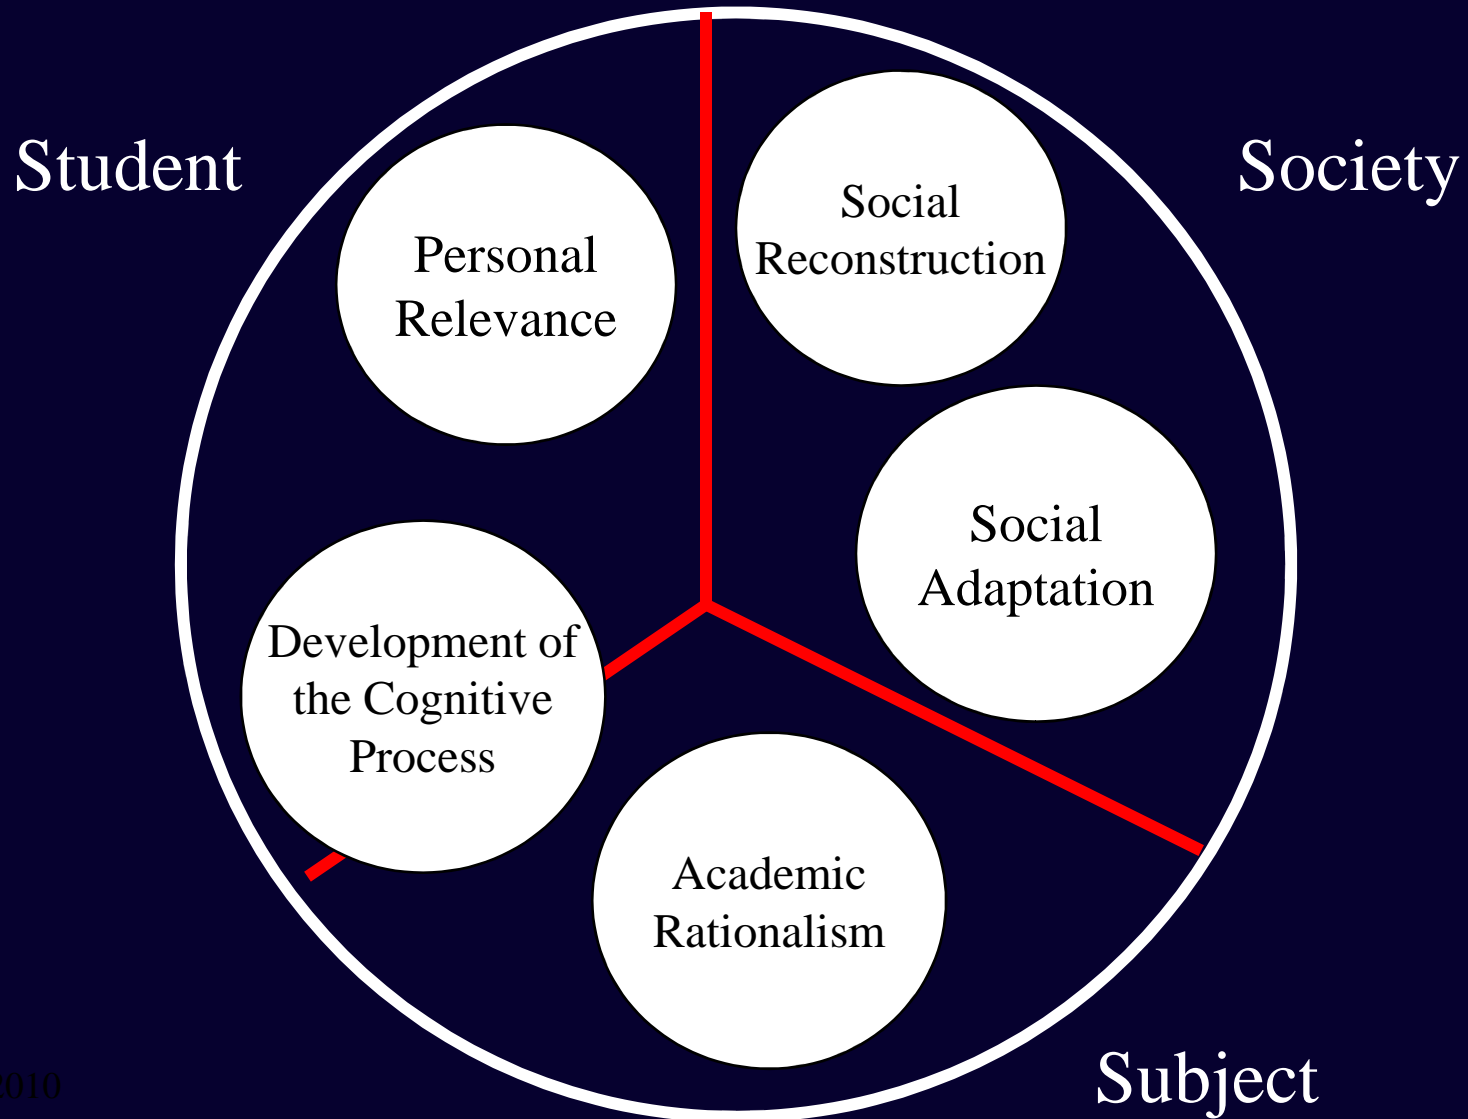

**Manipulation:** Being able to perform certain actions by following instructions and practicing. Example: Creating work on one's own, after taking lessons, or reading about it.

**Precision:** Refining, becoming more exact. Few errors are apparent. Example: Working and reworking something, so it will be "just right."

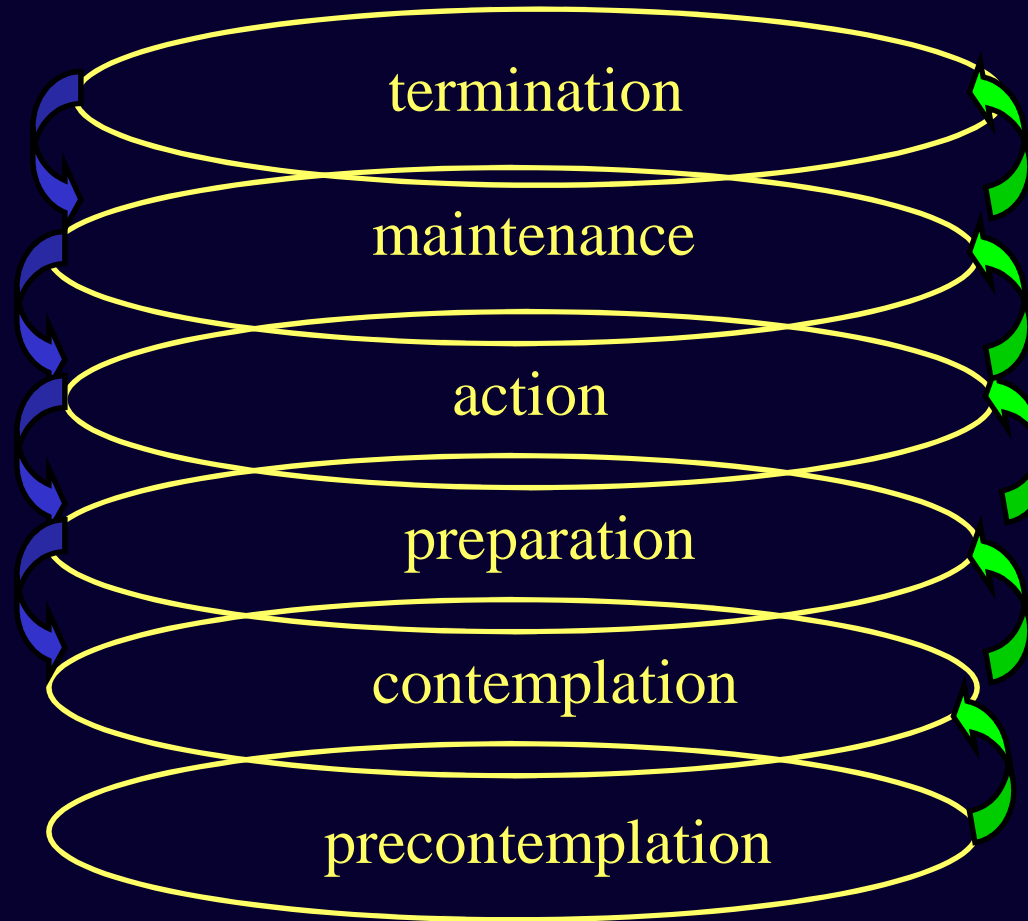

**Articulation:** Coordinating a series of actions, achieving harmony and internal consistency. Example: Producing a video that involves music, drama, color, sound, etc.

**Naturalization:** Having high level performance become natural, without needing to think much about it.

# VALUE ORIENTATION

# Transtheoretical Model - Stages of Change

# THE LAW OF HUMAN CONNECTEDNESS

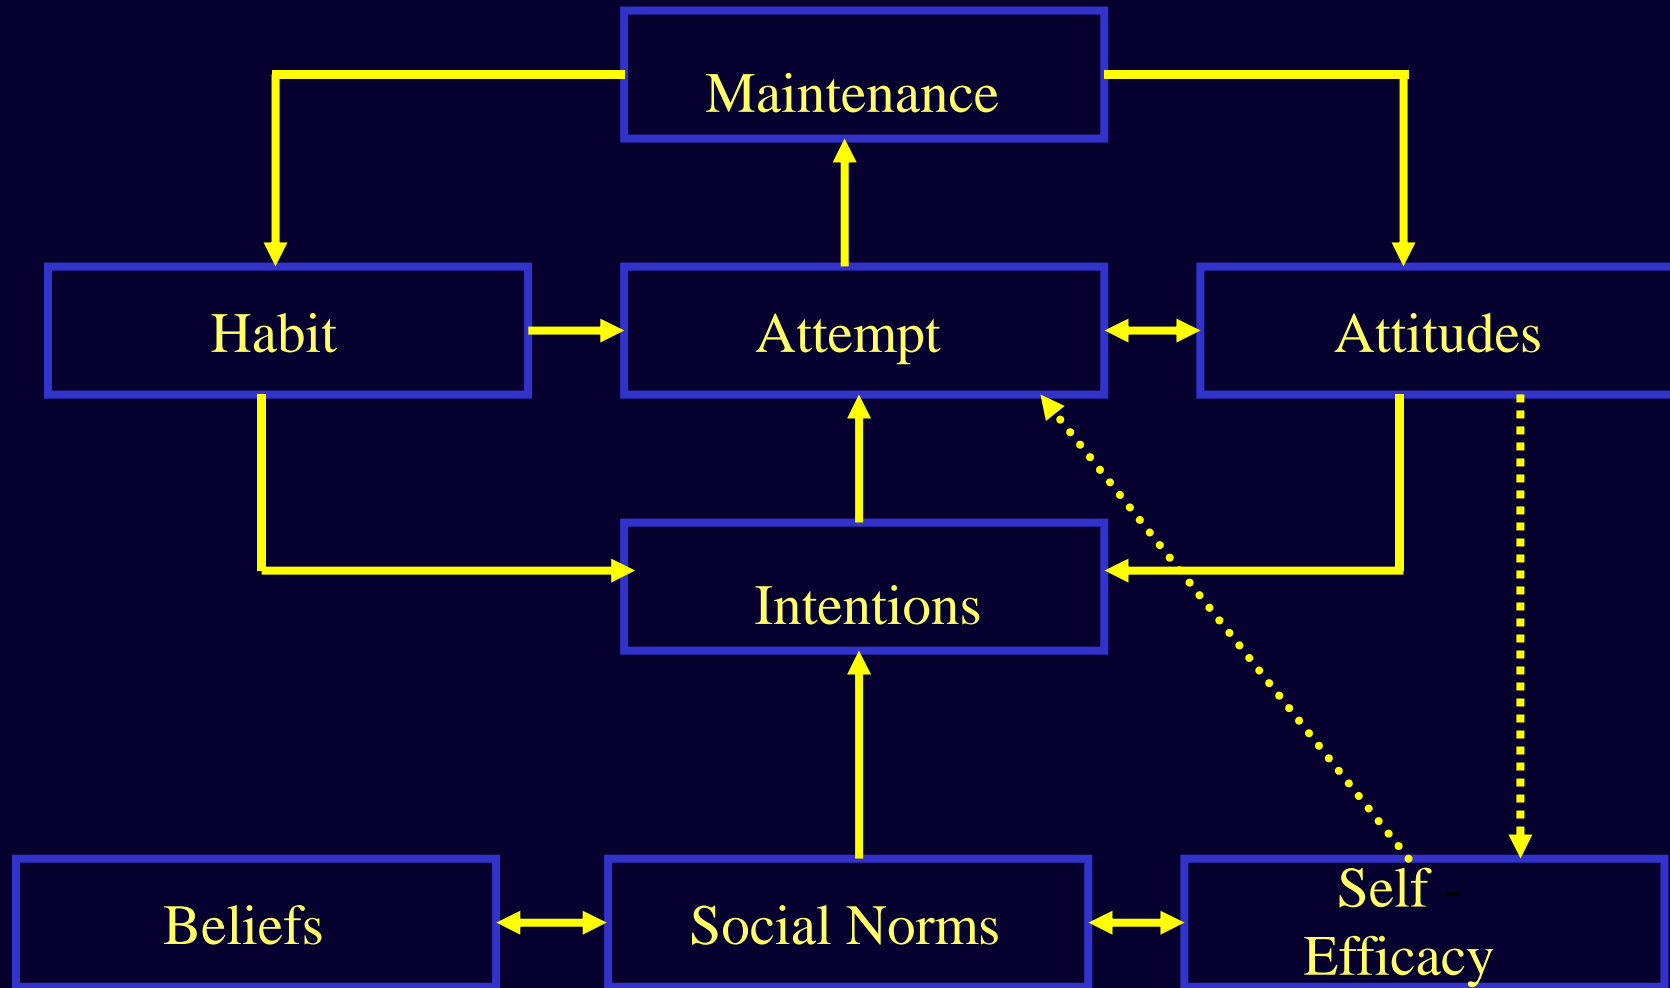

Given a full experience of human options, a person will ultimately select the option most helpful in establishing connectedness, because the connectedness is the *highest of the affirmative emotion*, an emotion so pleasurable that all other options will become secondary.

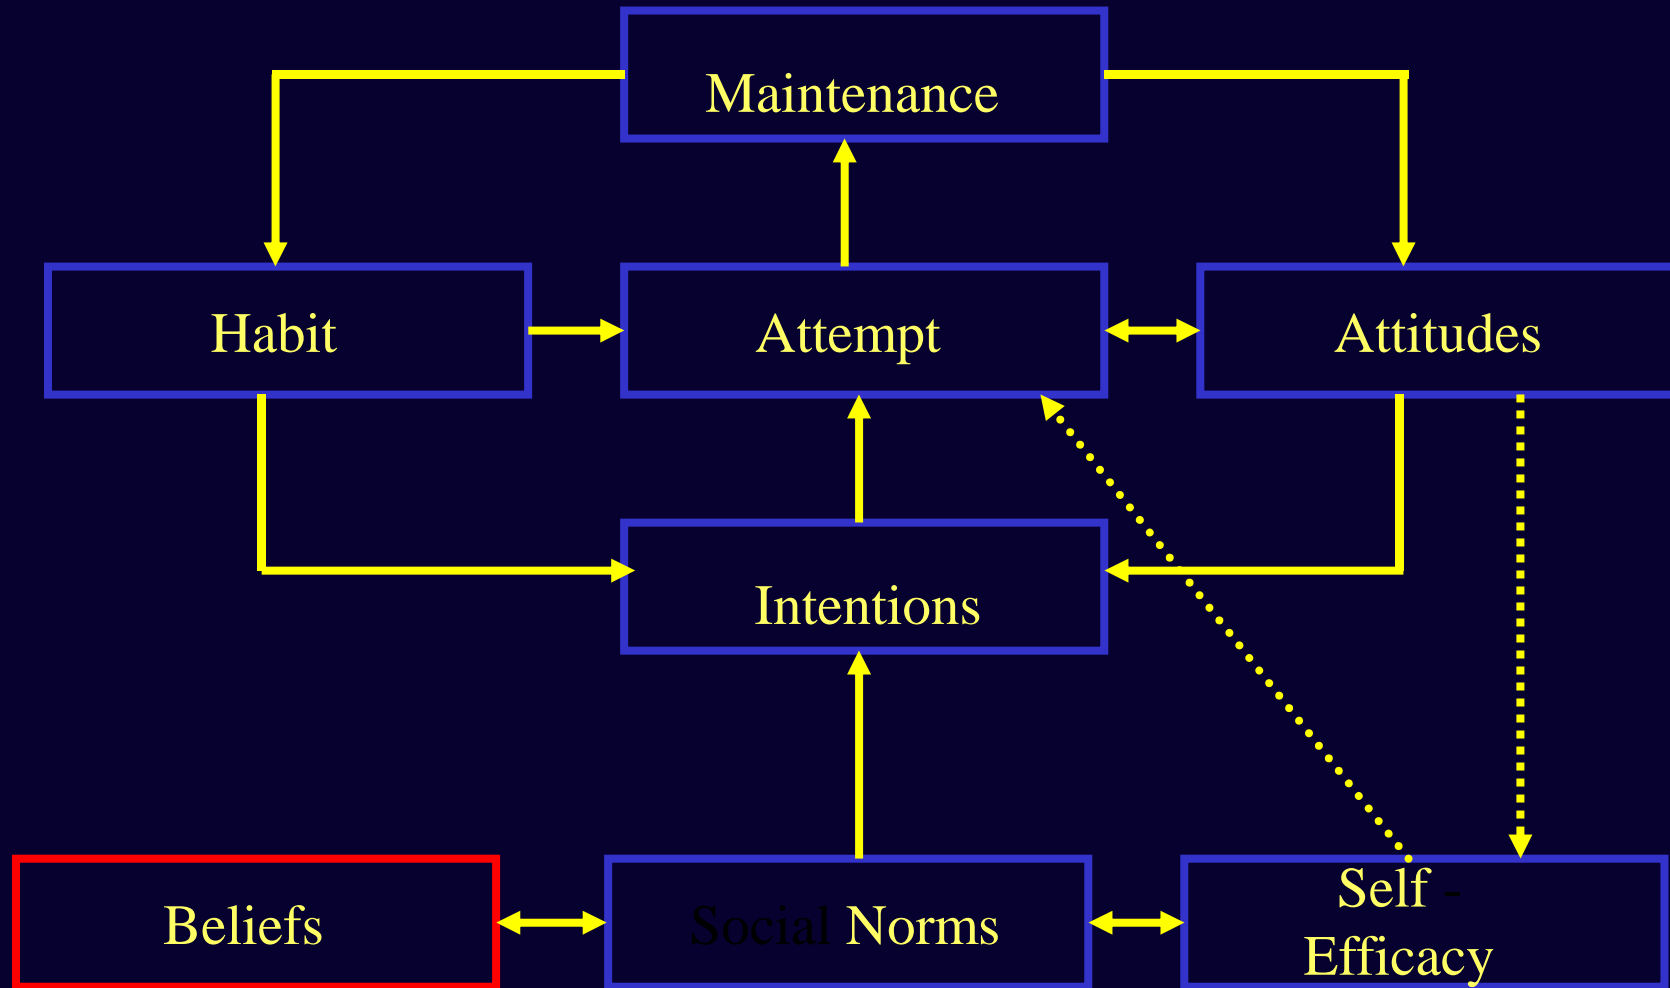

# TYPES OF CONNECTEDNESS

- Type I - Psychobiological Connection to other People
- Type II - Connection to One's Genetic and Cultural Past
- Type III - Connection to Meaning and Purpose (Washington Carver)

# Exercise Adoption and Adherence

# Exercise Adoption and Adherence

# Beliefs

❖ Result based programs

❖ Demonstrated  
Relationship

❖ Hands on  
experiences/participation

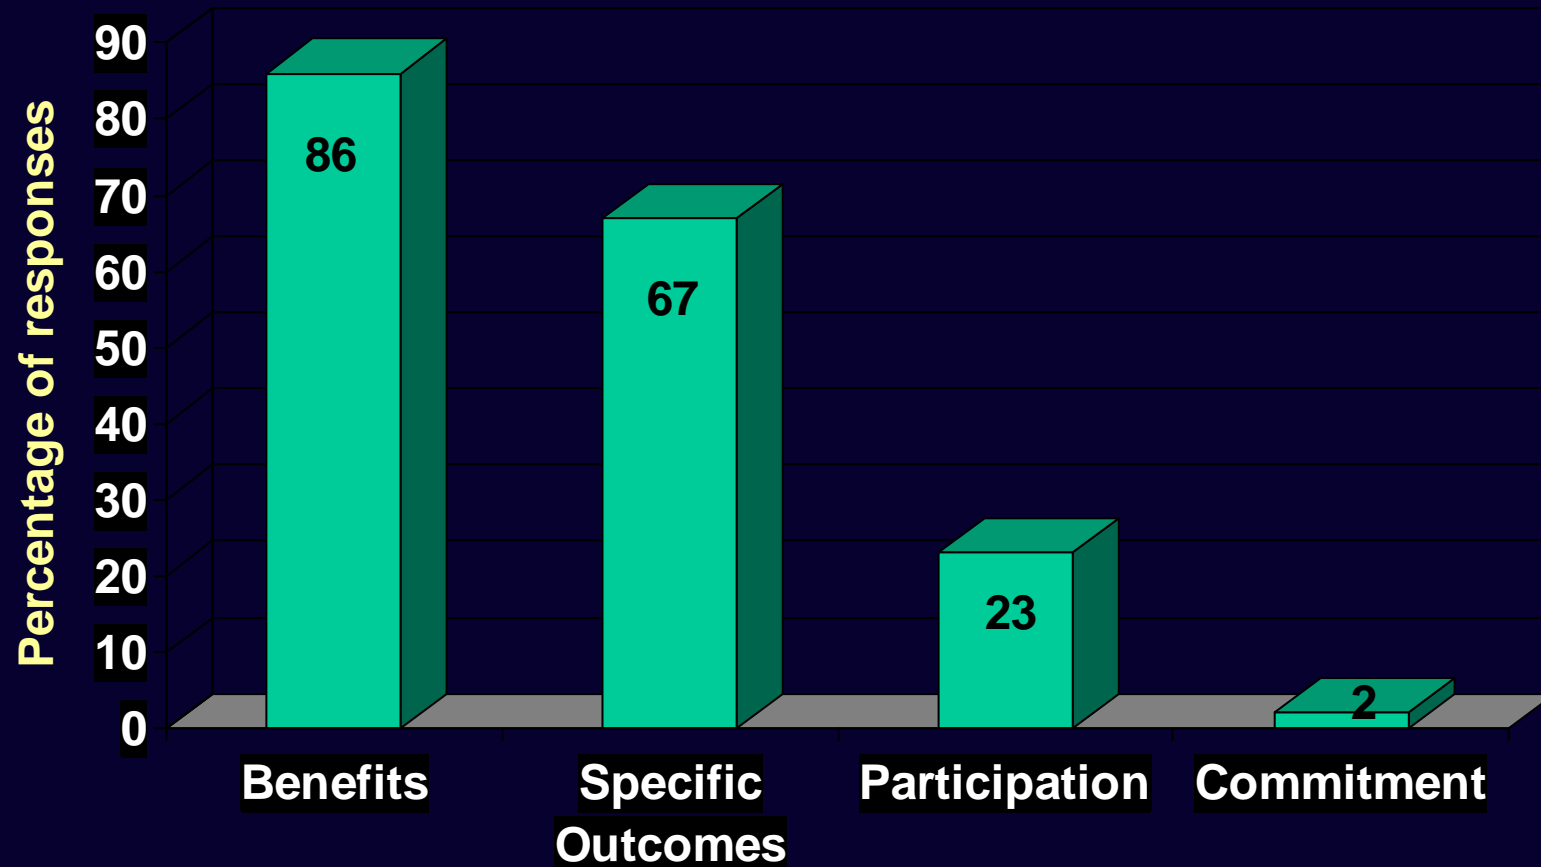

❖ Exercise and Health

❖ Exercise and Productivity

❖ Exercise and Appearance

❖ Functional Ability

# Sport and Exercise Participation Knowledge of Benefits

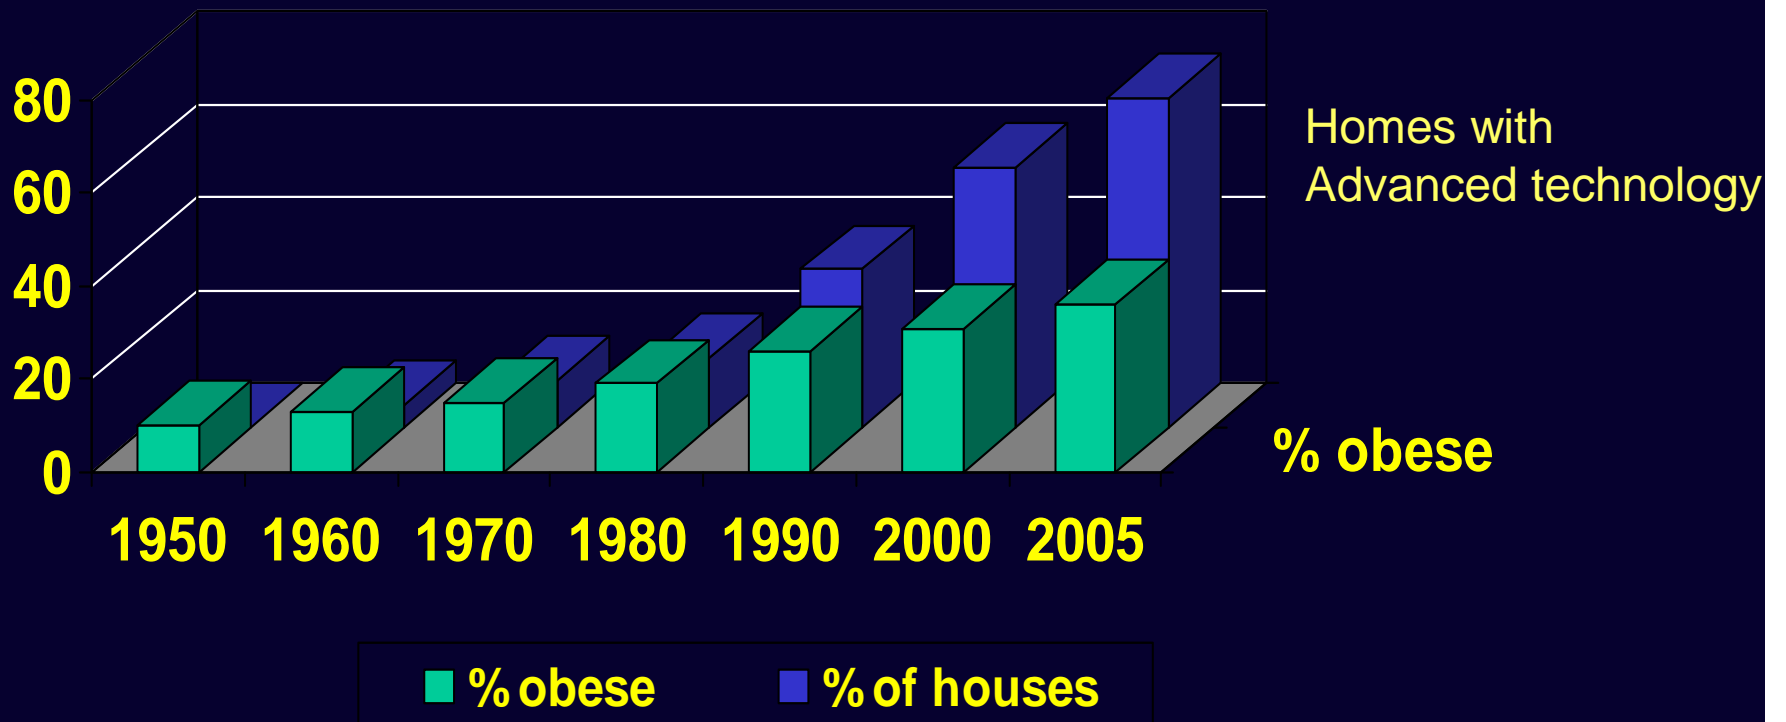

# Relationship between the obesity, fat and caloric intake

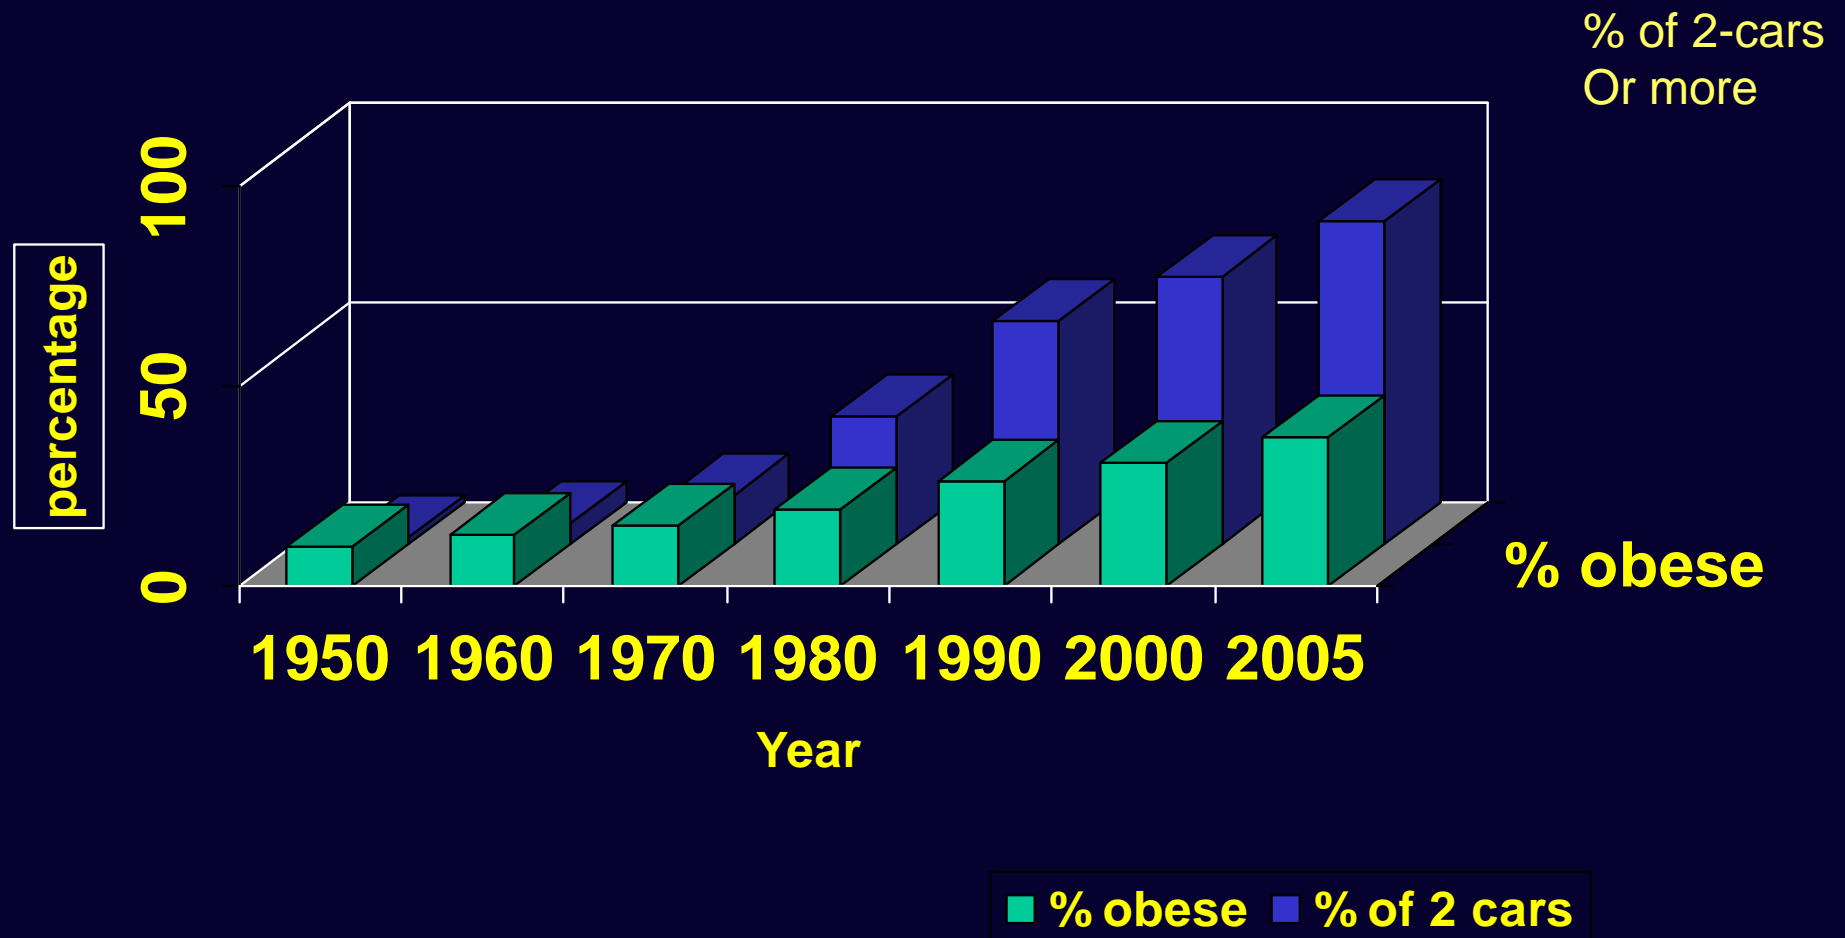

■ % obese ■ caloric intake

# Home – Energy saving Technologies

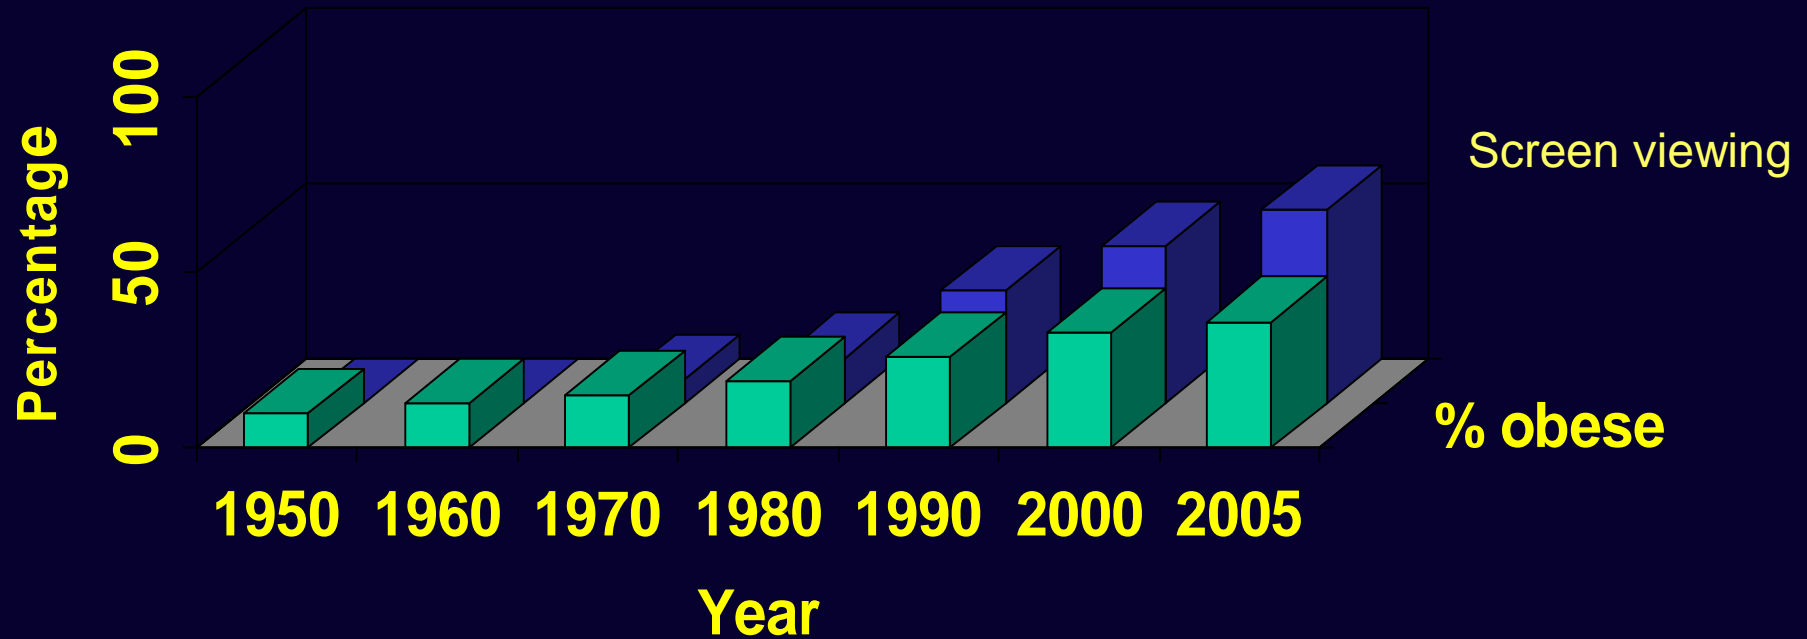

# Relationship between Number of Cars per Household and Obesity

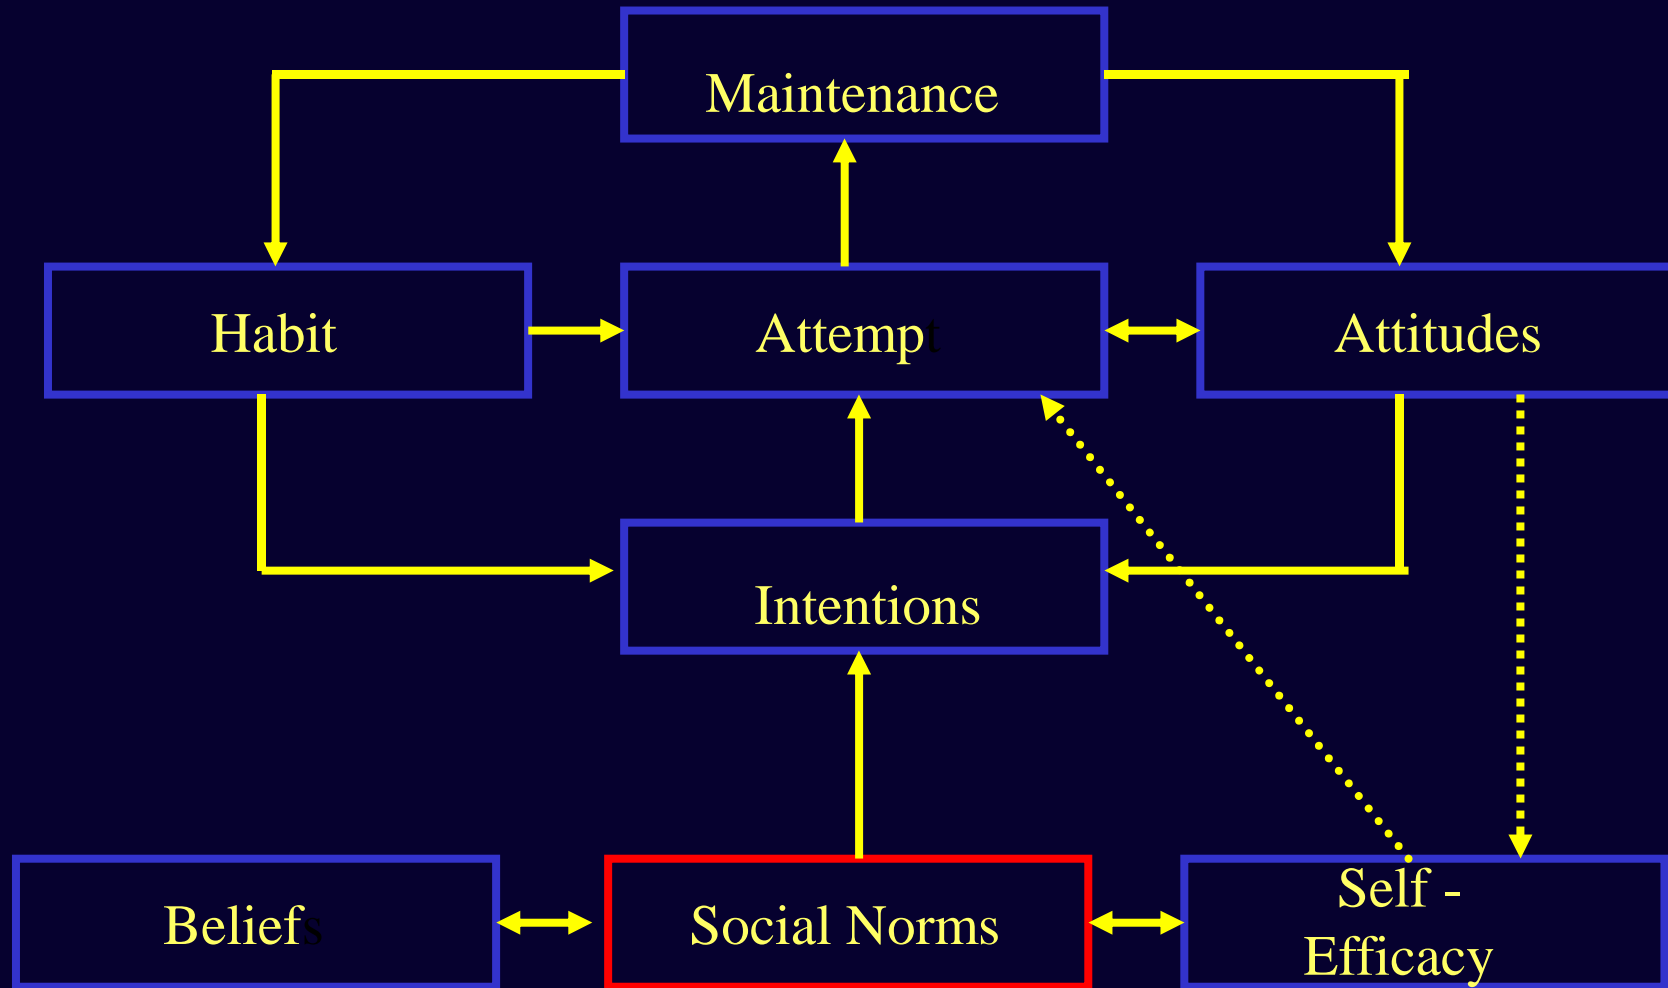

# Home – Screen Viewing

■ % obese ■ % > 20 hours

# Exercise Adoption and Adherence

# Social Norms

## Normative Beliefs

- 💧 daily exercise
- 💧 community programs
- 💧 family time
- 💧 school priority (homework and remedial programs)

## Values and Role Modeling

- 💧 Parents
- 💧 Friends
- 💧 Physicians

# Social Norms

## Environmental Determinants

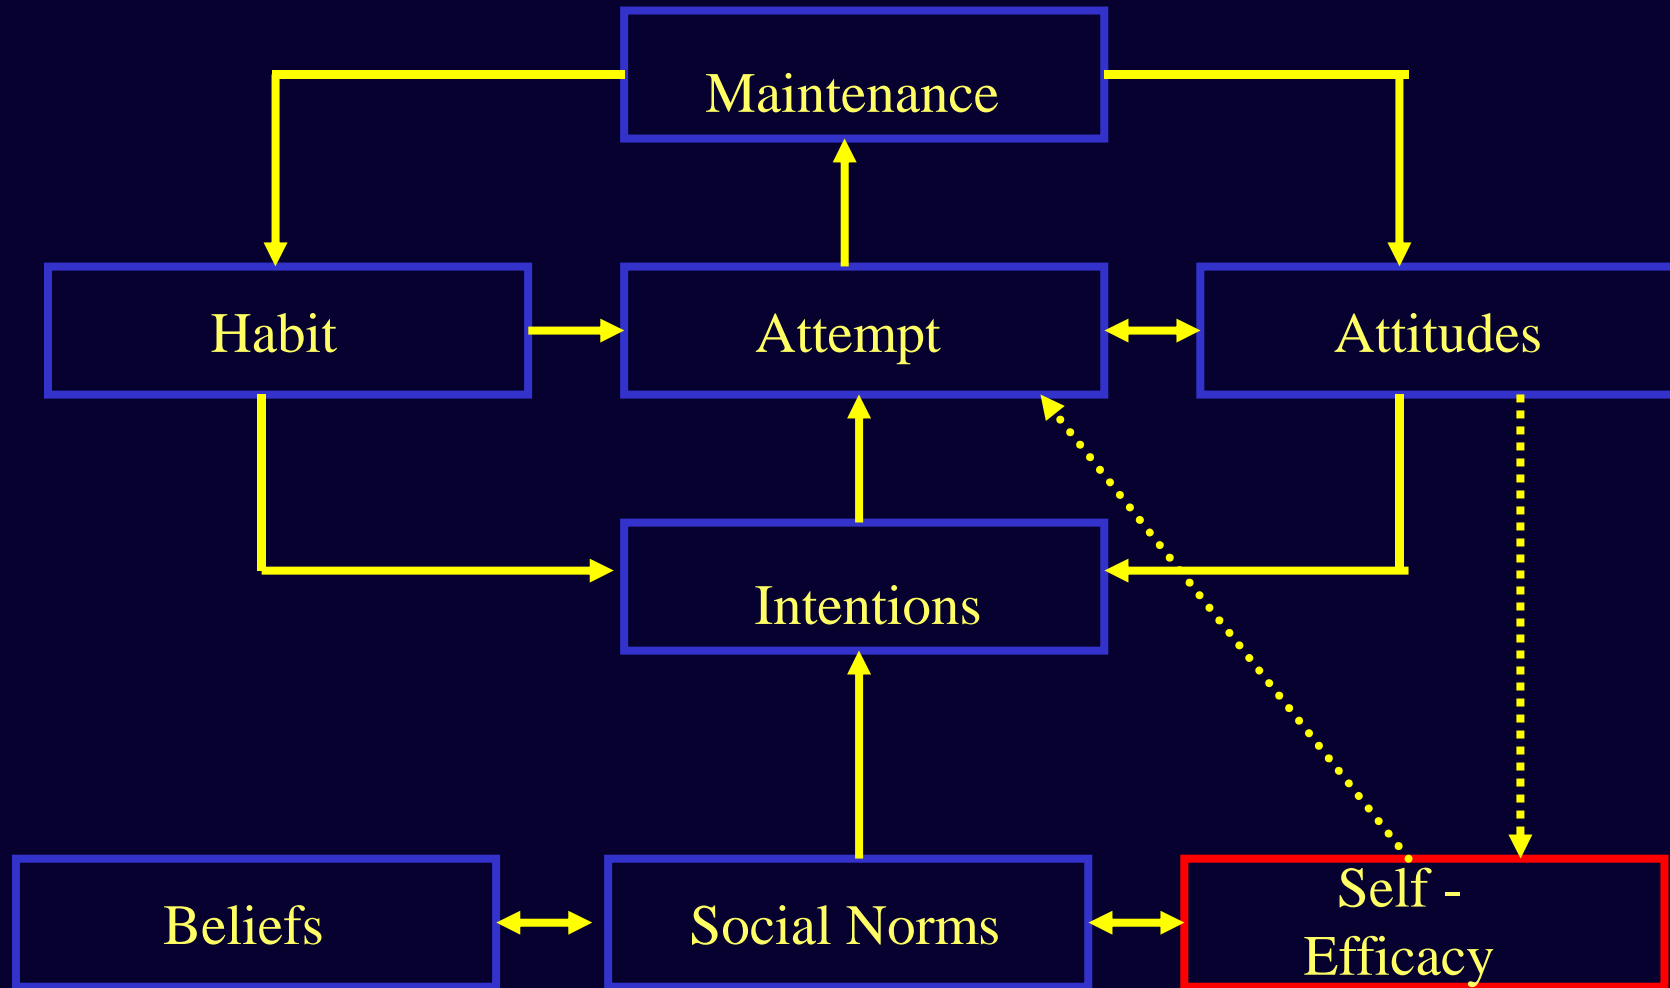

- ❄ provision of facilities
- ❄ access to facilities/programs
- ❄ social support
- ❄ attitudes
- ❄ government
- ❄ policy
- ❄ compliance

# EXERCISE ADHERENCE DETERMINANTS

- Personal - factors stemming from a personality, experiences and attitudes
- Physiological - factors reflecting physical attributes of an individual
- Situational - factors embedded in environmental conditions
- Behavioral - factors pertinent to impeding or fostering exercise participation
- Programmatic - factors addressing the structure and delivery of exercise programs

# Exercise Adoption and Adherence

# Self-Efficacy

- *Self-perception of one's capability to execute successfully desired behaviour*
- Past experiences
- Fitness level
- Skill level
- Actual competencies
- Vicarious experiences

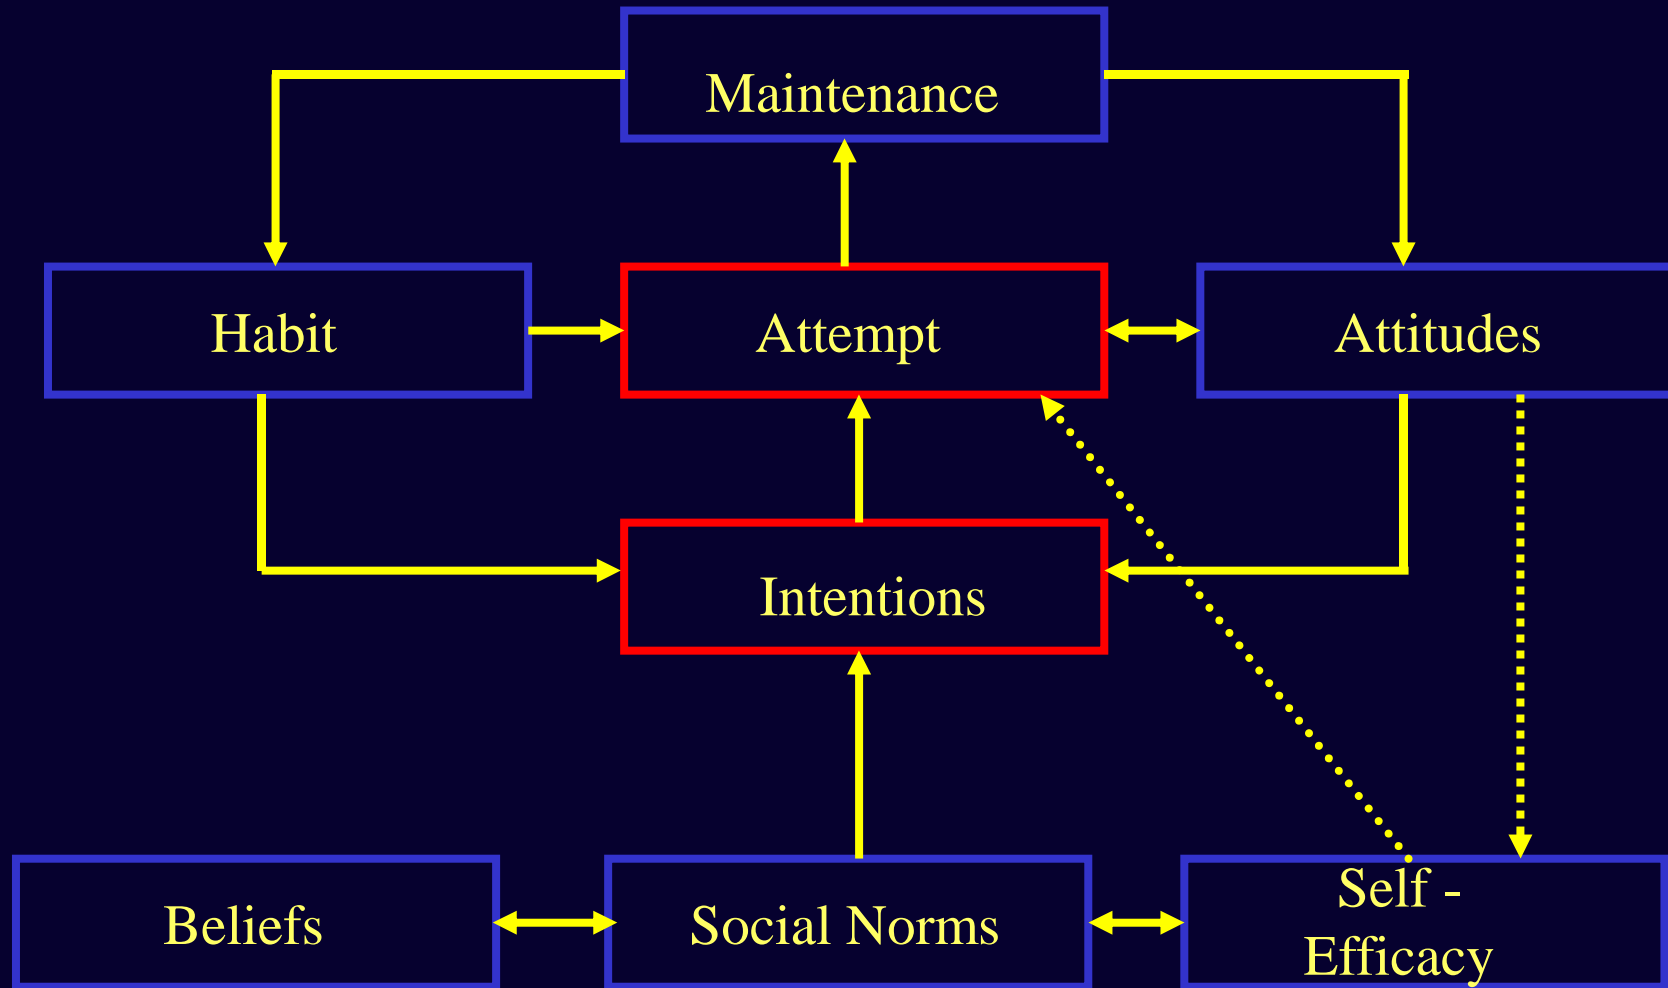

# Life - Time Sports Skills Acquisition

- Life-time Sports Skills
- Recreational Skills
- Community Programs Skills
- Family Participation Skills

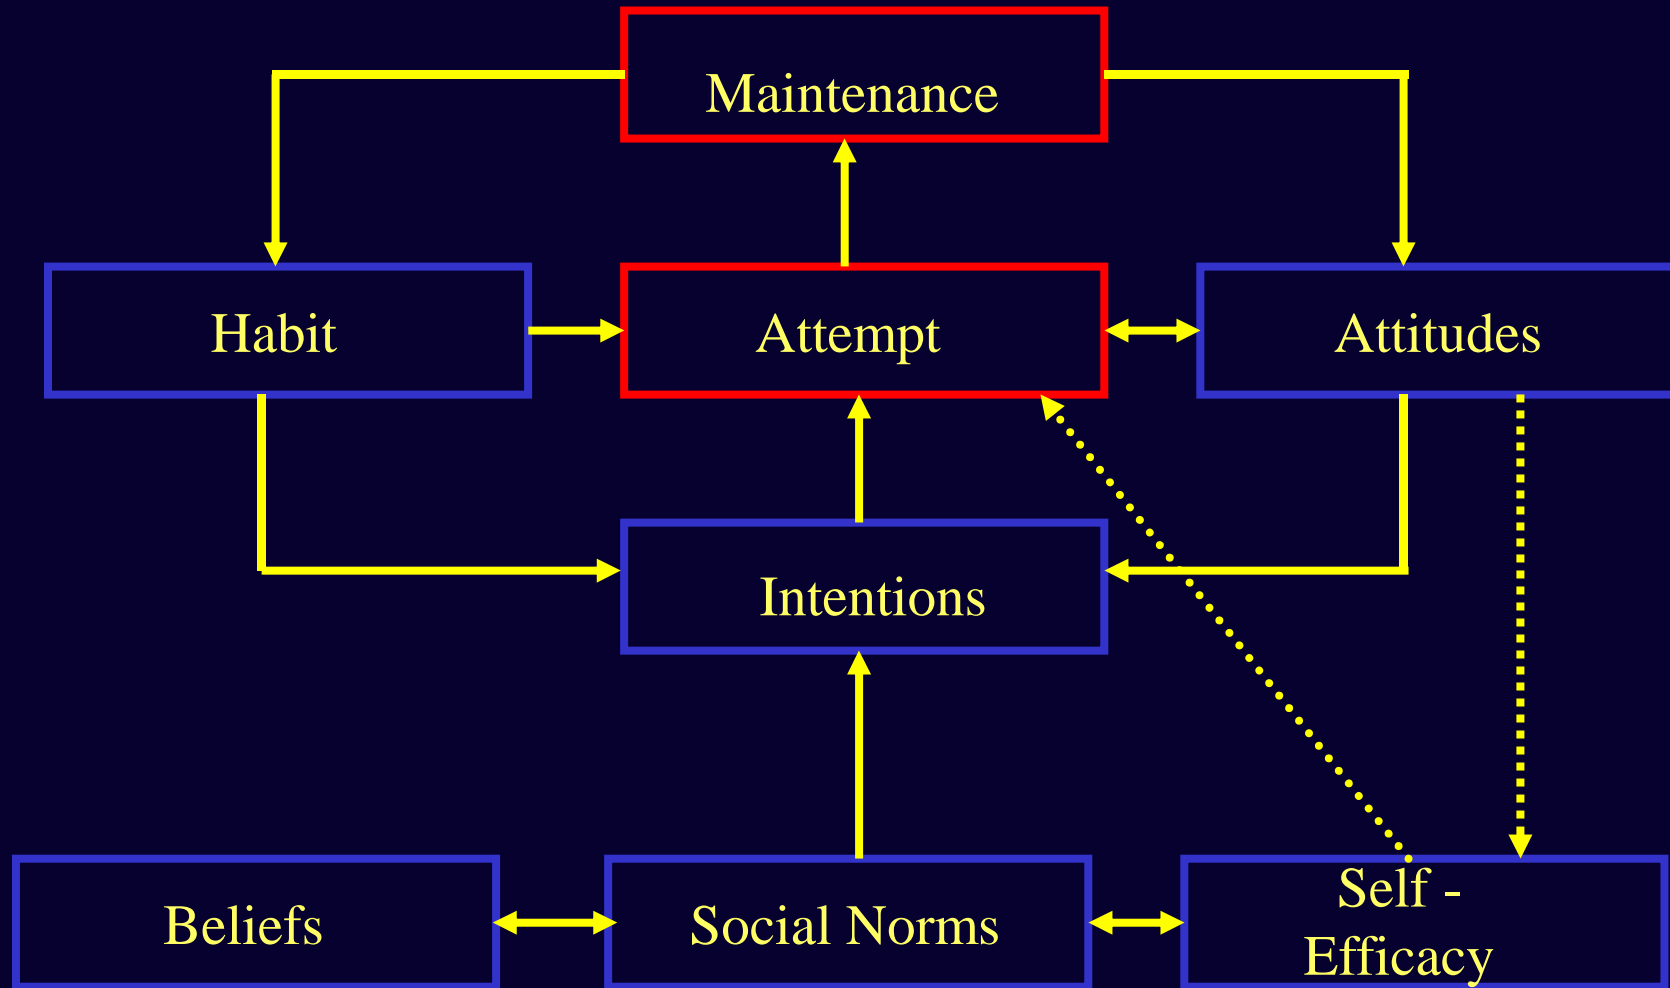

# Behavior Adoption and Adherence

# Intentions

- Program Design
- Significant others active support
  - 76% of parents (1-4 year-olds)
  - 20% of 13 year-old
  - Only 10% of children in daily PE
- Facilities access
- Equipment

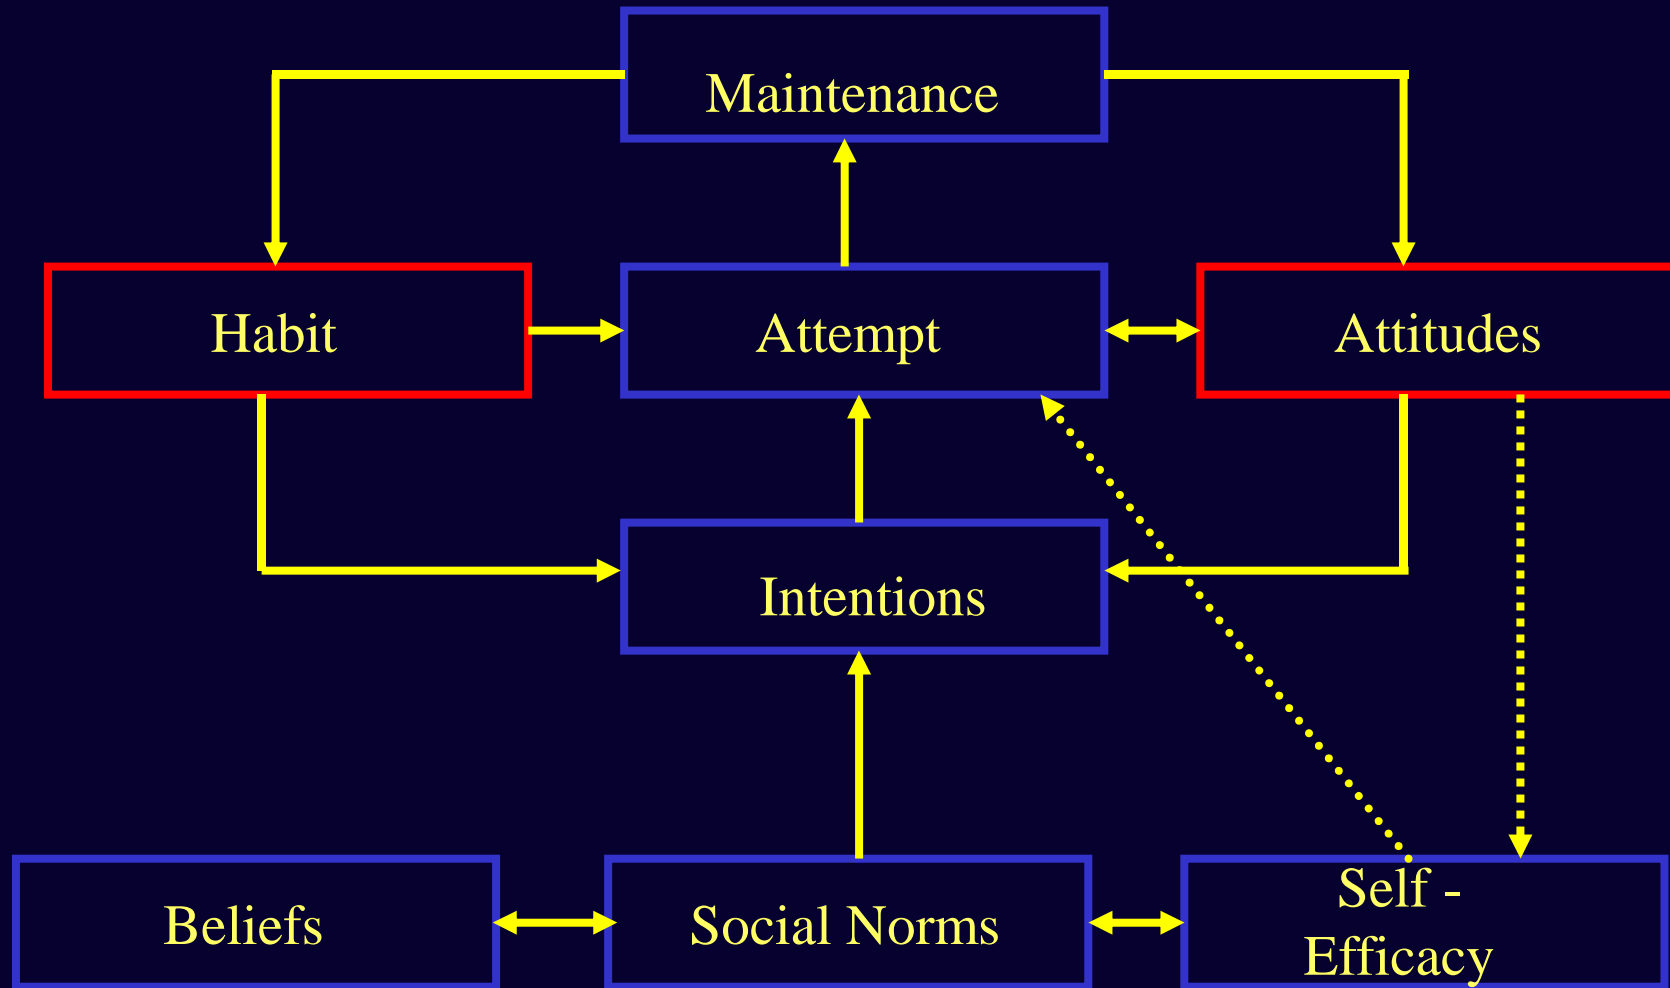

# Behavior Adoption and Adherence

# Attempt

- Goal setting
- Time management
- Contracts

# Behavior Adoption and Adherence

# Adoption/Maintenance

- Relapse Prevention
- Contingency planning
- Counter Conditioning
- Stimulus Control

THANK YOU!
